Abstract

The adoption of organic production and processing is highly determined by market demand. Therefore, this is reflected in consumers’ awareness and attitudes towards organic food products. This research of 120 respondents. Results indicated that the main reasons for purchasing organic food products are an expectation of a healthier and environmentally friendly means of production. Organic buyers tend to be older and higher educated than those who do not buy them. In addition, consumers’ trust in the authenticity of the goods and price are also issues. However, the main barrier to increase the market share of organic food products is consumer information.

Keywords: organic food, consumer behaviour, food labels, consumer awareness

Introduction

Food consumption patterns are changing as a result of health and environmental issues. Interest in organically produced food is increasing throughout the world. Global demand for organic products remains robust, with sales increasing by over five billion US dollars a year (Willer, Yussefi-Menzler, and Sorensen 2009). In Thailand, rapid socio-economic development has been accompanied by modernization and industrialization of agricultural food production. Since the implementation of the National Economic and Social Development Plan in 1961, the Thai government has promoted an industrial and export-oriented agriculture in 1997, the Ministry committed to provide funds to conduct the Pilot Project on Sustainable Agriculture Development for small farmers, which by 1999 was administrated by local organizations in 34 provinces.

Statement of the problem

The study is conducted to know the problem faced by the using non-organic products which has chemical fertilizers input to get more yield of the products today the world requires new discussion and innovation which are leads to the potential buyers usage of harmful to the consumers have got awareness on organic products started buying and utilizing for their regular consumption thus this particular study has been carried out.

Objectives of the study

➢ To study the respondents’ awareness towards the organic foods products.
➢ To study the customer attitude towards buying the organic foods products.
➢ To study the consumers’ willingness-to-pay for organic products.

Scope of the study

Organic food promotes a balance of human, other living organisms and the nature. It also promotes no artificial preservatives and best maintain the originality of food. This prevents excess use harmful ingredients and thereby ensures health. This study attempted to gain knowledge about consumer attitude towards organic food product consumption and to see whether there is any potential this might have for changing their behavior. The rationale for carrying out this study is that consideration for the environment could come only from well-informed citizens who are aware of, and fully committed to their rights to a quality health and environment. Nevertheless, before any behavior can be changed, it is necessary to evaluate the current state of consumers’ awareness and knowledge. Therefore consumer’s attitude, perception towards organic food products, willingness to pay for organic food product and intention to purchase organic food will be the main agenda of this study.
Research methodology
Nature of research design
The research design adopted in the study was descriptive design, which is concerned with the descriptive of a group. In descriptive research in such a way that the respondents is able to understand clearly what the researcher wants and provides distinct information to measure the data.

Area of the study
The area of the study is in Coimbatore city.

Period of the study
The study was conducted for a period of six months

Sources of data
The study is based on primary data collection. The data has been collected from the users of organic food products. The secondary data was collected from the articles, journals, newspapers and various websites.

Sampling design of the study
The sampling technique in this project is convenient sampling. The sample size comprises of different types of users who are using organic food products. A sample of 120 respondents was taken into account for finding their uses for the organic food products.

Tools for analysis
The following are the tools applied on the respondents given by the respondents to analyze and derive the result.

- Chi-square analysis
- Average Ranking analysis

LIMITATION OF THE STUDY
1. The area was wide since it is confined only to Coimbatore city so results cannot be universally accepted.
2. The study is limited to the sample size of 120 respondents only. So this cannot be a “full proof”
3. The researcher has collected data by convenient sampling using questionnaire and there is a possibility of certain deviations.

ANALYSIS AND INTERPRETATION
CHI-SQUARE ANALYSIS

(I) Hypothesis: There is no significant relationship between Education qualification and types of organic food products.

<table>
<thead>
<tr>
<th>Education Qualification</th>
<th>Vegetable &amp; Fruits</th>
<th>Herbs &amp; Medicaments</th>
<th>Milk and Dairy</th>
<th>Others</th>
<th>Total</th>
</tr>
</thead>
<tbody>
<tr>
<td>Illiterate</td>
<td>8(30%)</td>
<td>4(15%)</td>
<td>9(34%)</td>
<td>11(41%)</td>
<td>30</td>
</tr>
<tr>
<td>Up to school</td>
<td>9(40%)</td>
<td>8(35%)</td>
<td>6(27%)</td>
<td>4(18%)</td>
<td>31</td>
</tr>
<tr>
<td>Under graduate</td>
<td>7(28%)</td>
<td>5(20%)</td>
<td>8(32%)</td>
<td>10(40%)</td>
<td>30</td>
</tr>
<tr>
<td>Post graduate</td>
<td>6(23%)</td>
<td>14(54%)</td>
<td>6(23%)</td>
<td>5(20%)</td>
<td>30</td>
</tr>
<tr>
<td>Total</td>
<td>30</td>
<td>31</td>
<td>29</td>
<td>30</td>
<td>120</td>
</tr>
</tbody>
</table>

Since $X_e^2 = 7.16$ for 12 degree of freedom at 5% level and $X_o^2 < X_e^2$ the null hypothesis is rejected. So there is a significant relationship between Education Qualification and Types of organic food products.

(II) Hypothesis: There is no significant relationship between Monthly income and price level of organic food products

Table - 1
Education Qualification and Types of organic food Products
Table-2
Monthly income and price level of organic food products

<table>
<thead>
<tr>
<th>Monthly income</th>
<th>Satisfaction level of herbal cosmetic products</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>Highly satisfied</td>
</tr>
<tr>
<td>Below Rs.10000</td>
<td>8(31%)</td>
</tr>
<tr>
<td>Rs.10001-20001</td>
<td>5(22%)</td>
</tr>
<tr>
<td>Rs.20001-40000</td>
<td>7(30%)</td>
</tr>
<tr>
<td>Above 40001</td>
<td>4(14%)</td>
</tr>
<tr>
<td>Total</td>
<td>24</td>
</tr>
</tbody>
</table>

Since $X^2 = 21$ for 12 degree of freedom at 5% level and $X^2 > X^2$, the null hypothesis is accept. So there is no relationship between Monthly income and price level of organic food products.

AVERAGE RANKING ANALYSIS

<td>5.09</td>
<td>3</td>
</tr>
<tr>
<td>Packaging</td>
<td>13</td>
<td>12</td>
<td>13</td>
<td>14</td>
<td>10</td>
<td>18</td>
<td>14</td>
<td>13</td>
<td>13</td>
<td>120</td>
<td>4.92</td>
<td>6</td>
</tr>
<tr>
<td>Suitable for children</td>
<td>19</td>
<td>20</td>
<td>8</td>
<td>12</td>
<td>11</td>
<td>14</td>
<td>13</td>
<td>10</td>
<td>13</td>
<td>120</td>
<td>5.35</td>
<td>1</td>
</tr>
<tr>
<td>Advertisement</td>
<td>14</td>
<td>20</td>
<td>13</td>
<td>9</td>
<td>15</td>
<td>15</td>
<td>12</td>
<td>15</td>
<td>17</td>
<td>120</td>
<td>5.32</td>
<td>2</td>
</tr>
</tbody>
</table>

The above table reveals that the respondents have assigned first rank to suitable, second rank to interferer advertisement, third rank to health, fourth rank to taste of, fifth rank to availability, sixth rank to packaging, seventh rank to quality, eighth rank to price, after ninth rank to quantity.

Majority of the respondents ranked to suitable in various consumer problems.
FINDINGS
There is a significant relationship between Education Qualification and Types of organic food products.
There no relationship between Monthly income and price level of organic food products.
Majority of respondents, ranked first to quality of the product.

SUGGESTIONS
The Creation of awareness of organic products is necessary among consumers.
Sustained improvement in product features would lead to increase in consumption of organic food products.
Allocation of separate shares for organic food products in departmental stores
Positioning organic food products by their specific attributes
Positioning organic food products by influencing consumer beliefs about the benefits they derive on consuming.

Conclusion
Organic food consumption is increasing because of concerns over environmental and health issues associated with food production. The increase in consumers’ interest in organic food products has been attributed among other issues to the growing demand for food free from pesticides and chemical residues. With the present study an attempt is made to describe the existing situation regarding. The main motives to purchase organic food products are health and environmental benefits, plus support for local or small farmers. In addition, an important factor that was revealed as a barrier to the development of organic foods is consumer information. Increased consumer awareness of organic labeling and their trust in organic labels as well as increasing the availability and range of organic food products, may be the most effective way of increasing their market share. The study found that the groups of buyers and non-buyers the main barrier of organic foods market share is the information available and consumer awareness valuable information on consumers in Chiang Mai province that can be used by policy makers in organic farming at the national and regional level.
