Abstract
This Paper examines corporal punishment in the current education system. During the Gurukul system of Education, the disciples were punished for their indiscipline and misbehavior. But the punishment was only confined to do some physical work and had no adverse effect on the physical and mental abilities of the child. In modern time period universalization of elementary education is the prime motive of our govt. But unfortunately this type of formal education makes the child more and more unhappy. The reason behind this unhappiness is existence of corporal punishment in formal system of education. The purpose of the present study was to judge the attitude of parents, teachers and students towards corporal punishment. For this purpose the investigator prepared self-made questionnaire. The finding shows that inflicting physical punishment creates pain, fear and feelings of humiliation and does not remove the cause of misbehavior. So the main thing is that discipline as a mean of punishment should be avoided and we should aim at making the child self-disciplined. Children should know how to discipline themselves and then grow up to become adults who are responsible i.e. able to carry on the important responsibilities of life.

Keywords: Attitude, parents, teachers. Students, corporal punishment

Introduction
Man is the crown of creation. He is gifted with certain powers that we do not find in other living beings. Education is one of the powers that develops the individual like a flower to distribute its fragrance all over the environment.
In fact, India has a long history of organized education. The Gurukul system of education is one of the oldest on earth but before that the guru shishya system was extant, in which students were taught orally and the data would be passed from one generation to the next. Gurukuls were traditional Hindu residential schools of learning⁷; typically the teacher's house or a monastery. Education was free (and often limited to the higher castes), but students from well-to-do families paid Gurudakshina, a voluntary contribution after the completion of their studies. At the Gurukuls, the teacher imparted knowledge of religion, scriptures, philosophy, literature, warfare, statecraft, mathematics, medicine, astrology and history. In this way destiny of future citizens chalked out by their Gurus. Although there were very strict and rigid rules to follow. During the time of education, the disciples were also punished for their indiscipline and misbehavior. But the punishment was only confined to do some physical work and had no adverse effect on the physical and mental abilities of the child. As we are living in scientific era, there is no denying fact that education is an essential part of everyone’s life. This is the reason our government is also becoming more and more conscious about education system and stressing on universalization of elementary education to make formal education system sound. But unfortunately, the formal education makes the child more and more unhappy and miserable as they are forcefully compelled to improve their intellectual, moral, ethical and social aspects of life. The reason behind this unhappiness is existence of corporal punishment in formal system of education¹⁻³,⁵⁻⁷.
Present Scenario

In the modern world, corporal punishment remains a common way of disciplining children; however its use has declined significantly since the 1950s. Race and gender have a significant influence on corporal punishment in the western world. Black children and male children are much more likely to be hit at home and school and corporal punishment of boys tends to be more severe, more frequent and more aggressive than corporal punishment administered to girls. The aim of Indian education system is to provide child-centered education with love and affection. But the reality is far away as we see how students are being exploited by their teachers in formal system of education. Now-a-days, education is becoming completely mechanical and people are studying not for knowledge but for the sake of examination. They are giving more stress on memory work rather than reflective thinking. Similarly, teachers and parents are becoming more conscious about education of their children. Expectations are much higher than the ability of their child which sometimes lead to frustration on the part of parents and teachers and adopts the path of corporal punishment towards children.

Objectives of the Study

1. To study the attitude of teachers and parents towards corporal punishment.
2. To study the attitude of parents and students towards corporal punishment.
3. To study the attitude of teachers and students towards corporal punishment.

Hypotheses of the Study

1. There is no significant difference in the attitude of teachers and parents towards corporal punishment.
2. There is no significant difference in the attitude of parents and students towards corporal punishment.
3. There is no significant difference in the attitude of teachers and students towards corporal punishment.

Sample: The present study aims to study the attitude of parents, teachers and students towards corporal punishment. For this purpose a total sample of 150 were selected on the bases of convenience sampling method. Then the investigator randomly selected 50 parents, 50 teachers and 50 students.

Tool Used

"Like the tools in the carpenter's box each research tool is appropriate in a given situation to accomplish a particular purpose. Each data gathering device has both merits and hazorels of limitations." -BEST (1986)

The purpose of the present study was to judge the attitude of parents, teachers and students towards corporal punishment. For this purpose the investigator prepared self-made questionnaire to study the attitude of parents, teachers and students towards corporal punishment.

Results and Interpretations

Table 1 shows that the calculated t-value is 3.66 which is more than the table value at 0.01 level. It reveals that there exists significant difference between the attitude of teachers and parents towards corporal punishment. Hence, the hypothesis framed earlier i.e. there is no significant difference between the attitude of teachers and parents towards corporal punishment stands rejected. It further shows that the mean scores of the teachers and parents on the attitude of corporal punishment are 136.76 and 144.64. It reveals that the parents showed more negative attitude towards corporal punishment as compared to the teachers (Fig 1).
Table 2 shows that the calculated t-value is 0.77 which is less than the table value at both .05 and .01 level. It reveals that there exists no significant difference between the attitude of parents and students towards corporal punishment. Hence, the hypothesis framed earlier i.e. there exists no significant difference between the attitude of parents and students towards corporal punishment stand accepted. It further shows that the mean scores of the parents and students on the attitude of corporal punishment are 144.64 and 146.16. It reveals that the students showed more negative attitude towards corporal punishment as compared to parents (Fig 2).

Table 3 shows that the calculated t-value is 4.49 which is more than the table value at both .05 and .01 level. It reveals that there exists significant difference in the attitude of teachers and students towards corporal punishment. Hence, the hypothesis framed earlier i.e. there exists no significant difference in the attitude of teachers and students towards corporal punishment stand rejected. It further shows that the mean of teachers and students towards corporal punishment are 136.76 and 146.16. It (Fig 3) reveals that the students showed more negative attitude towards corporal punishment as compared to the teachers. 8-12

**Contribution**

It is universally agreed that the quality of an educational programme is determined to a great extent by the teaching of a teacher. Teachers play a key role in chalking out the destiny of future citizens. So teachers should adopt an approach which is tempered with love, care and understanding the child. The teacher should know that inflicting physical punishment creates pain, fear and feelings of humiliation and does not remove the cause of misbehavior. So the main thing is that discipline as a mean of punishment should be avoided and we should aim at making the child self-disciplined. Children should know how to discipline themselves and then grow up to become adults who are responsible i.e. able to carry on the important responsibilities of life.
